# Guadalupe “Lupe” Jara

Hellolupejara@gmail.com | (323) 609-5804 | LinkedIn | GitHub | Portfolio

## SUMMARY

Full-stack software engineer specializing in **React.js** front ends backed by **C#/.NET** and **Node.js** services, consuming and building **RESTful APIs** against **SQL** and cloud-hosted data. Comfortable across the full stack — from component architecture and state management to API design and database integration — in fast-paced, collaborative **Agile/Scrum** teams.

## SKILLS

**Front End: React.js**, **JavaScript**, **TypeScript**, **Next.js**, **HTML5**, **CSS**, jQuery, **Ajax/Axios**, Bootstrap, Formik, Yup, Chart.js, YAML

**Back End: C#**, **.NET Core**, **ASP.NET**, ADO.NET, **Entity Framework**, **Node.js**, **RESTful APIs**, **T-SQL**, Firebase, Supabase, Tanstack, Brevo

**DevOps / Tools: Azure DevOps**, **CI/CD**, **Git**, **GitHub**, Docker (familiar), Jira, Trello, Postman, SSMS, Visual Studio, VS Code

**Collaboration: Agile/Scrum**, Critical Thinking, Problem Solving, **Object-Oriented Design**, Cross-functional Collaboration

## PROJECTS

**Mi Casita** | *Personal Full-Stack Project*

- Built a centralized home-organization dashboard (calendar, sticky notes, reminders, lists, messaging) using **React**, **Next.js**, and **Tailwind CSS**, with **Firebase** for backend and auth.
- Implemented **Firebase OAuth** authentication (login/logout, profile updates, secure account deletion) and role-based, secure HTTP routing between public and authenticated pages.
- Used **Yup** and **Formik** for schema-based form validation, and built a dynamic settings form that pre-populates and updates user data in real time.
- Built draggable, real-time sticky notes with customizable fonts and colors, persisted to the database.
- github.com/guadalupejara/mi_casita

**Echos** | *Personal Full-Stack Project*

- Built a private, distraction-free writing app with **React** and **Tailwind CSS**, using **Vite** for the build tooling.
- Built customizable UI (background, font, and color themes) via controlled dropdown state.
- Implemented two text-release interactions: an instant scatter/erase effect and a toggleable auto-erase-as-you-type mode.
- Added a local save feature to export reflections as a **.txt** file.
- github.com/guadalupejara/echos

## EXPERIENCE

**Software Developer** | *TopSpin Max*

*06/2025 – Current*

- Developed and enhanced a Gear feature in **React**, supporting create, update, and delete operations for gear history data; refactored and built reusable stepper, form, and table **components**.
- Identified, documented, and tracked application **bugs** using Trello; reproduced reported issues, implemented fixes, and validated solutions through **testing**.
- Implemented feature designs and interaction behaviors from **Figma**, contributing to UI consistency and early-stage mockup ideation.
- Integrated location-based inputs into tournament features and managed updates across staging and production branches to support release readiness.

**Software Developer Intern** | *Cloudfit Software*

*06/2025 – 08/2025*

- Migrated Ant Design components to **MUI**, using a dual-repository workflow (Repo A generating **component** files for Repo B).
- Integrated local **SQL** databases with front-end applications via **Entity Framework**, enabling smooth front-to-back data flow.
- Collaborated with Product Managers and stakeholders in **Agile** sprints to align technical tasks with business goals.
- Worked within an **Azure DevOps** environment managing work items, repos, and **deployment pipelines**.

- Worked one-on-one with a dedicated mentor to navigate DoD company “ways of working” and participated in sandbox workshops to expand technical and collaborative skills.

**Software Engineer** | *Method*

*06/2024 – 07/2024*

- Engineered metric-based leaderboards, including a leaderboard displaying overall experience points, using **Chart.js**; built to scale for Method’s 2,000+ employees.
- Collaborated with 2 Product Managers and 2 UI Designers on UX/UI processes — user interviews, feature prioritization, and finalization for login, navigation bar, dashboard, and leaderboard pages.
- Implemented **Next.js**, leveraging server-side rendering and advanced routing to optimize performance and scalability.
- Developed **cloud functions** for retrieving and inserting documents from collections, including embedded functions to trigger specific calls.

**Fullstack Software Engineer** | *Resolvely.AI*

*10/2023 – 03/2024*

- Built **React.js** front-end views with **Axios** connections to **.NET APIs** retrieving **SQL** data via stored procedures.
- Streamlined quality control across the application by implementing **Yup** schema validation on the front end and **C#** backend checks to keep data types consistent with **SQL** table definitions.
- Built a responsive dual-card form UI using **Formik** and **React useState** for live state capture; success/error handlers in **React** and **.NET** communicated with **SQL** via **ADO.NET** and **ASP.NET**.
- Built a customizable administrative email feature triggered on a **PUT** call; built the **controller** endpoint, model, and methods in **.NET** to securely receive and update data, using interface-based abstraction and **Brevo** for templated email.

## EDUCATION

**Master of Arts, University of Roehampton**

*06/2019*

**B.A. & B.S., University of California, Riverside**

*06/2016*

## CERTIFICATIONS

- MongoDB University — **SI Associate** (07/2024)
- Google — UX Design Specialization (01/2023)
